

# Call Detail Records Web Service

## Overview

Sipx CDR Log is a RESTLET plugin which provides a resource whereby one can obtain the Call Logs for a particular user. Records are sorted by start date in descending order.

It is bundled as a jar file and is loaded by the sipXrest container on initialization. It is invoked by HTTP GET to a specific URL.

The CDR Log consults etc/sipxpbx/validusers.xml to authenticate users and map user aliases to user names.

The general form of the URL is

<https://host:6666/cdr/user?fromdate=yyyymmdd&limit=<max # of records to return>>

Optional URL parameters:

fromdate - start date from which call records will be retrieved.

limit - maximum number of call log records to return.

## Examples

Using curl, you would initiate a query for the specified user calling records

```
curl -k --digest -X GET -u 200:123 https://192.168.1.104:6666/cdr/200?limit=5
```

It returns first five calling records for user 200. The call is secured and DIGEST authentication is applied

Sample response as follows:

```
<?xml version="1.0" encoding="UTF-8" standalone="no"?>
<Results>
  <Row>
