

User Web Portal

Selecting User Portal Mode

The User Portal operates in either 'Old style' or 'New style'. The system defaults to the old style. Changing the style is a system wide setting (you can't have some users on one and some on the other).

To change the User Portal mode, login to the system as a superadmin and click System -> Admin Settings and select the mode at the bottom of the page as seen in the following screen shot:

The screenshot shows the sipXcom Administration Configuration page. At the top, there is a navigation bar with tabs for USERS, DEVICES, FEATURES, SYSTEM, and DIAGNOSTICS. The SYSTEM tab is selected. The page title is "Administration Configuration" and there is a "Show Advanced Settings" link. The settings are organized into sections: "Administration Configuration" and "Web Portal".

Administration Configuration

- Logging Level: NOTICE (Default: NOTICE)
- System Audit: (Default: checked)
Enables system audit.
- Password Policy: Empty Password/VM Pin Fields (Default: Empty Password/VM Pin Fields)
