

# Legacy sipXcom ISO Images

As of release 19.04 eZuce will no longer be producing ISO images for sipXcom. The appropriate method of installing sipXcom is to install a minimal CentOS 7 release and run an RPM based installation. We've simplified the installation process down to the point where the effort to maintain and test ISO's is no longer necessary.

We'll maintain some ISOs for a little while on the download server but will remove them at some point.
